1. Upon reconsideration, the restriction requirement has been dropped and all the claims have herein been allowed. The main reason these claims are being allowed is that the prior art does not disclose, teach or suggest the overall aspects of marking either a polycarbonate protective layer of a product or a polycarbonate product by introducing a tracing substance into the polycarbonate in amounts which will not affect the data stored on the product and manufacturing said (data) product, the tracing substance being indicative of product information. Given the language of the claims, it is rather clear that the product being made is a data product, or one that contains data. Also, the prior art does not show the aspects of either tracking or authenticating a data message which has been impregnated with a tracing substance comprising an isotope, such isotope being indicative of at least two of the listed parameters in instant claim 24.
